

COMMUNITY SPOTLIGHT

Ashley's Story

" For the last three years we have only planted native species and pollinator friendly plants on our property, including creating a 10" x 10" pollinator garden in our backyard. Our flowers have supported so many butterflies, moths and bees! We use far less water with native species that flourish naturally, and no fertilizer. We have so much colour and variety in our gardens all year long, with so little effort! They are a feast for the eyes!"
