

## Business Spotlight:

# THORDON BEARINGS INC.

## Tell us about Thordon Bearings! What do you offer?

Thordon Bearings Inc., a Thomson-Gordon Group company, is a family-owned business manufacturing non-metallic, oil and grease-free bearing systems, seals and other shaft line products for the global marine, clean power, pump, and industrial markets. Our products are manufactured in Burlington, Ontario. They are available in 100 countries through our network of 75 distributors and agents who represent Thordon worldwide.

Visit their [website](#) to learn more, or follow them [Facebook](#), [Twitter](#), and [Linked In](#).

## What makes your products different?

Many metallic bearings are lubricated with oil and grease. For example, every year approximately 60 million litres of operational oil from shipping leaks into our oceans and waterways. About 95% of ships still operate with an oil lubricated propeller shaft system. Thordon's products are produced using proprietary polymer materials that are lubricated with water, or self-lubricated, therefore eliminating oil or grease usage, meaning ZERO risk of oil pollution to our rivers, lakes, and oceans and are proven, cost effective, environmentally sustainable solutions.

## Is there anything else you do on-site?

Similar to our commitment to create environmentally friendly products, we maintain that focus in our day-to-day practice in our office and our plant.

Thordon strives to recycle wherever possible, we reclaim our metal scraps from machining, use energy efficient light bulbs, and even accommodate employees with electric vehicles so they are able to charge them on-site.
